

# Carbon Reduction Plan

Supplier name: I'm So Good Ltd

Publication date: 19/10/23

## Commitment to achieving Net Zero

I'm So Good Ltd is committed to achieving Net Zero emissions by 2050.

## Baseline Emissions Footprint

Baseline Year: **2023**

**Additional Details relating to the Baseline Emissions calculations.**

**I'm So Good!** is a food manufacturer where our core operation has changed from being a small catering operation to a larger central production food manufacturer. This complete change of our core business activity means that our previous emissions data cannot be directly compared to our current emissions data.

We are therefore closely monitoring our emissions footprint during the current year and the closing figures for 2023 will become our baseline. Our YTD figures are shown in the "Current Emissions Reporting" section of this plan.

**Baseline year emissions: 2023**

<b>EMISSIONS</b>	<b>TOTAL (tCO<sub>2</sub>e)</b>
<i>Scope 1</i>	<i>TBA</i>
<b>Scope 2</b>	<i>TBA</i>
<b>Scope 3</b> (Included Sources)	<i>TBA</i>
<b>Total Emissions</b>	<i>TBA</i>

## Current Emissions Reporting

Reporting Year: 2023 (YTD) 31/12/2023	
EMISSIONS	TOTAL (tCO <sub>2</sub> e)
Scope 1	1
Scope 2	16
Scope 3 (Included Sources)	<b>Scope 3 declaration is voluntary.</b> This <b><u>will</u></b> be reported by I'm So Good in due course; however calculation of Scope 3 emissions is complex and this reporting exercise is due to be completed by 31 December 2023 ready for the baseline figures
<b>Total Emissions</b>	<b>17 tCO<sub>2</sub>e</b>

## **Emissions reduction targets**

**This is the first Carbon Reduction Plan produced by I'm So Good Ltd.**

I'm So Good! is currently operating a relatively small-scale central production plant.

We are currently assessing our baseline emissions in the current year and then implement carbon reduction projects to achieve net zero emissions by 2050.

It is the objective of I'm So Good to achieve net zero emissions as soon as possible by utilising zero carbon technologies within our operations at every opportunity.

Being a relatively small operation now, we have the opportunity to grow with the goal of net zero at the forefront of our minds and we are determined to build in minimal environmental impact in all that we do.

Our initial target will be to reduce our carbon emissions by 25% by the close of 2025. From then on we will continue to reduce our carbon emissions by at least 10% per year.

We will update this document year on year to reflect our achievements in pursuing net zero.

**A GRAPH WILL BE INSERTED HERE IN FUTURE REPORTS TO SHOW OUR PROGRESS IN ACHIEVING NET ZERO.**

## **Carbon Reduction Projects**

### Completed Carbon Reduction Initiatives

As a new business currently involved in establishing a base line for emissions reduction, we have not completed any carbon reduction initiatives to date, but on a daily basis we ensure that we do not emit more carbon than absolutely necessary by training our staff to be carbon aware because we understand the importance of achieving minimal carbon emissions as soon as possible.

Energy consumption is our greatest source of carbon emissions on a daily basis. To this end we ensure that we do not consume energy in our business which is not essential to our day to day operations. Our staff are trained to turn off all electrical and gas consuming appliances and devices.

## Forthcoming Carbon Reduction Initiatives

I'm So Good will implement the following carbon reduction initiatives in the next 2 years.

- We have replaced our oven to a more energy efficient Ivario to ensure minimal energy consumption.
- We will continue to promote energy awareness in our business to all our staff to ensure that we do not burn more energy than is absolutely necessary. We will appoint a responsible person from our team to monitor electricity and gas consumption and ensure energy is not wasted at any point in our operation.
- We will reduce our dependence on natural gas in our factory by replacing our boilers with carbon reducing appliances such as heat pumps.
- At the end of our energy supply contract we will ensure that our electricity supplier provides us with electricity generated from renewable sources.
- We will assess and where necessary change our supply partners for those which show a commitment to net zero in line with ourselves. This will be particularly prevalent for supply partners who consume large amounts of energy and fuel in providing their services to us. For example, our distribution partners who fuel their delivery vehicles with fossil fuels.
- We will calculate our scope 3 emissions and declare that information in our carbon reduction plan. The calculation and declaration of scope 3 emissions is currently voluntary, but we are determined to undertake this complex process so that we fully understand our true emissions footprint and can therefore act effectively to reduce it.
- We will calculate and understand the impact of the packaging we use in the supply of our products. Not only will we choose packaging which has a low emissions footprint in the packaging manufacturing process but we will ensure that we only use packaging which is fully recyclable and will actively encourage our customers to recycle wherever possible. We will use reusable containers wherever possible which can be returned to us for refill wherever possible.

We hope to initiate the following initiatives in addition to our commitments above.

- Where we need to purchase or lease vehicles in the future these will be hybrid or fully electric vehicles depending on the requirements of use.
- When the time comes to move premises we will put environmental considerations at the forefront of our choices in our new facilities. These will include such considerations as the ability to install solar panels and other carbon neutral technologies as well as the energy saving measures incorporated into the fabric of the building etc.

## Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard<sup>1</sup> and uses the appropriate Government emission conversion factors for greenhouse gas company reporting<sup>2</sup>.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard<sup>3</sup>.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

### Signed on behalf of the Supplier:

Emily Willis
